

**KEEPSAFE MAXIMUM
LAMINATED GLASS**

KeepSafe Maximum® laminated glass by Solutia Inc. This glass features a tough layer of polyvinyl butyral (PVB). Using heat and pressure, the .090" or .100" gauge PVB is bonded between two panes of annealed, heat-strengthened, or tempered glass. If the glass is broken, the laminated interlayer is designed to remain intact to reduce the risk of object penetration during a high-winded storm and the resultant pressure equalization that is capable of destroying the home.
